

G-3

PAPER INKS

One of the most stable operator-friendly systems in the flexographic market today

The G-3 system is the 3rd generation of Galaxy paper inks utilizing the latest advances in graphic arts raw materials virtually eliminating the need for press-side additives. The re-wet ability of the ink is un-matched by any other water-based flexographic printing ink introduced to the industry to date. The open time, great color strength, and low viscosity set this paper ink system apart from the competition.

FEATURES

- Works well on both analog and digital plates.
- Excellent printability and open time on solids, type, screens and combination printing when used with high line anilox rolls and various doctor blade systems.
- Available in a wide range of strengths from 2.0 – 5.0 bcm on standard Pantone® Formula Guide colors and 1.0, 1.3, 1.5, and 1.8 bcm systems for process printing.
- Available in lightfast and non-lightfast colors; and in SWOP process colors upon request.

Excellent Re-Wet

Clean Printing

Virtually Maintenance-Free

Great Color Strength

Low Viscosity

SPECIFIC DATA

pH	9.2 - 9.8
Viscosity	12-17" 3 Zahn cup at 25°C
Substrates	Paper and paperboard
Primary Uses	Narrow web tag and label
